

Breadcrumb

A bit about us.

Breadcrumb is a modern site safety and compliance tool built for the construction industry and used by over a million workers in Australia and globally across the United Kingdom, Ireland, United States, and New Zealand.

By digitising a typically disjointed process and creating a direct path of communication to the worker, Breadcrumb helps site teams manage projects safely and efficiently.

1000+

General contractors globally.

1M+

Worker profiles on the platform.

120K+

Subcontractors set up.

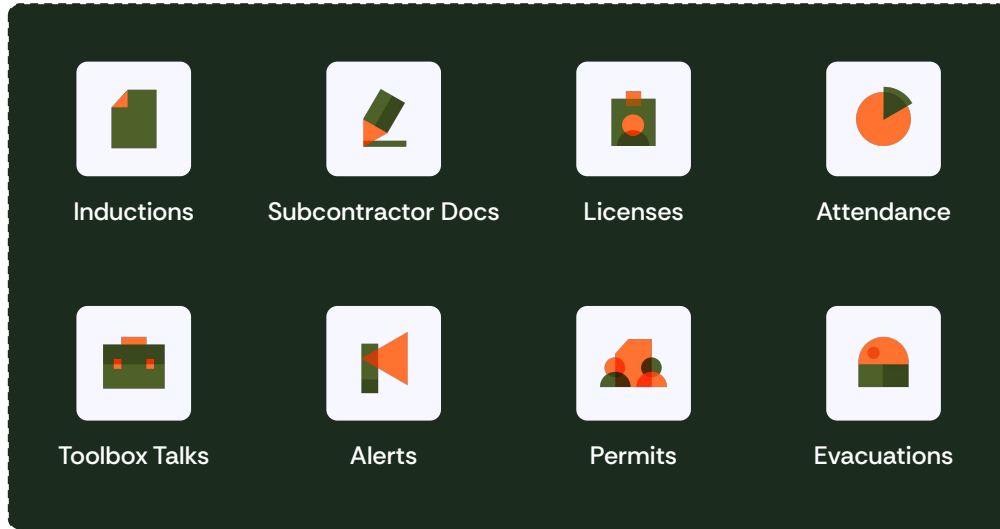

80K+

Customer projects.

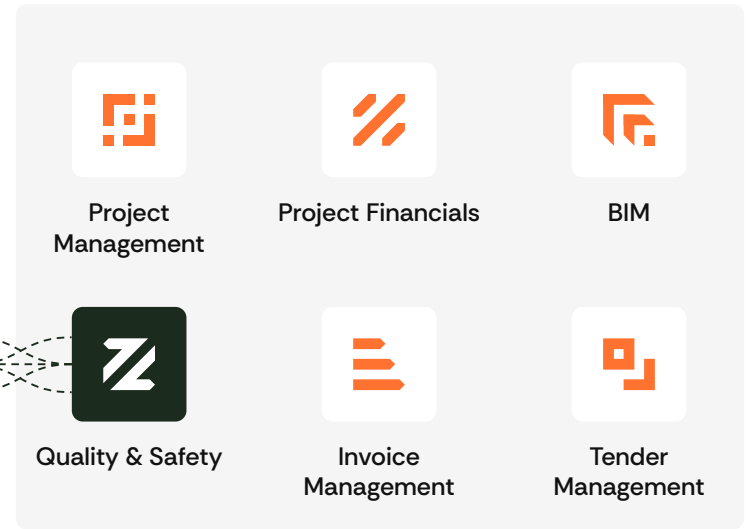

All the tools, all integrated.

Our integration with Procore unites your site safety with your project management platform – no extra admin and no time lost switching between different systems.

PROCORE

The quality and safety duo.

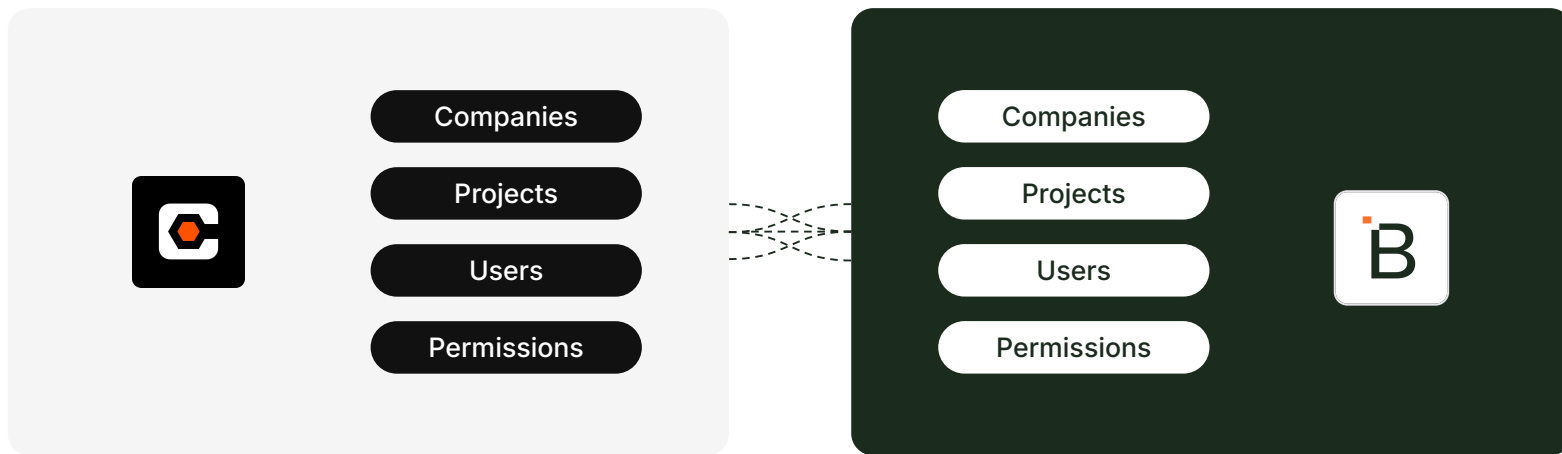

While Procore delivers comprehensive project management tools, Breadcrumb complements it by providing an easy-to-use safety and compliance add-on.

Together, they create a unified solution that empowers teams to manage projects more efficiently while keeping safety a top priority across every site.

Directories integrated.

Breadcrumb syncs with your Procore account to pull all essential operational data. This comprehensive integration includes your subcontractors, existing user permissions, and all relevant project details, allowing you to deploy the system with zero setup friction.

Safety documents integrated.

Everything from orientations with licenses and training to permits to work, JHAs, PTPs, pre-task plans and the rest.

They are all securely stored in Breadcrumb and reciprocated in Procore Documents.

The image displays two side-by-side screenshots of software interfaces. The left screenshot shows the 'Breadcrumb' 'Induction Report' table, which lists various induction records. The right screenshot shows the 'Procore Documents' interface, specifically the 'Documents' section for 'Singh & Morgan MEP', listing induction documents with their names and creation dates.

Work hours integrated.

All foreman, workers and visitor information is saved and stored in both Breadcrumb and Procore. You can see who was on which project and when without switching between systems.

The image displays two side-by-side screenshots of software interfaces. The left screenshot shows the 'Breadcrumb' interface with an 'Activity' table listing workers, suppliers, visitor types, check-in/out times, and durations. The right screenshot shows the 'Procore' interface with a 'Site Diary' section containing 'Working Hours' and 'Timecards' tables. Both interfaces include search bars and navigation menus. A large 'B' logo is overlaid on the left, and a 'C' logo is overlaid on the right.
